6. Transport and Traffic management in low visibility area

Create a software solution that uses Data Analytics/machine learning/IOT using multiple Technologies on real time basis with a better accuracy for the traffic management of the vehicles of an organization. This would enable the organization to optimize the traffic, smooth transportation, better efficiency and MIS to calculate the inventory in real time basis and would stop the pilferage of items. The major items or products that can be used by this software is –

a. Managing traffic at the gate and mine check gates
b. Proving solution for the low visibility traffic during fog and rain while transporting ores
c. Providing solution for smooth vehicle management and movement at checking gates with raw materials, finished products and vacant

Creating alerts whenever necessary for better traffic management
